                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SUBCELLULAR LOCATION: Microsomal.
TISSUE SPECIFICITY: Liver.
SIMILARITY: Belongs to the FMO family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: This protein is involved in the oxidative metabolis: a variety of xenobiotics such as drugs and pesticides. Form I catalyzes the N-oxygenation of secondary and tertiary amines. CATALYTIC ACTIVITY: N,N-dimethylaniline + NADPH + O(2) = N,N-dimethylaniline N-oxide + NADP(+) + H(2)O.

SUPERFAMILY.
SIMILARITY: Contains 1 IQ domain.

SIMILARITY: IN THE N-TERMINAL SECTION; FAMILY OF PROTEIN KINASES.
SIMILARITY: IN THE C-TERMINAL SECTION;

BELONGS TO THE MYOSIN

VSP\_004941; BELONGS TO

THE

SER/THR

IsoId=P10676-2; Sequence=VSP\_004940, MILARITY: IN THE N-TERMINAL SECTION; MILY OF PROTEIN KINASES.

"The minimal gene complement of Mycoplasma genitalium.";

Science 270.397-403(1995)

C -i- CATALYTIC ACTIVITY: ATP + L-histidine + tRNA(His) = AMP +

Gibnosphate + L-histidyl-tRNA(His).

C -i- SUBLINIT: Homodimer (By similarity).

C -i- SUBCELLULAR LOCATION: Cytoplasmic

-i- SIMILARITY: Belongs to class-II aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

"Characterization of anf genes specific for the alternative
nitrogenase and identification of nif genes required for both
nitrogenases in Rhodobaccer capsulatus.";

LMOL MICROBIOL 8:673-684(1993)

LMOL MICROBIOL 8:873-684(1993)

LMOL MICROBIOL BY THE NITROGENASE COMPLEX, WHICH HAS 2 COMPONENTS: THE
CCATALYZED BY THE NITROGENASE COMPLEX, WHICH HAS 2 COMPONENTS: THE
IRON PROTEIN (COMPONENT 2) AND A COMPONENT WHICH IS EITHER A
MICROBIOL HONOR FORTEIN A VANABULW-IRON, OR AN IRON-IRON PROTEIN.

CC MOLYBDENUM-IRON PROTEIN A VANABULW-IRON, OR AN IRON-IRON PROTEIN.

C-!- CATALYTIC ACTIVITY: 8 reduced ferredoxin + 8 H(+) + N(2) + 16 ATP

C--- CATALYTIC ACTIVITY: 8 reduced ferredoxin + 8 H(+) + N(2) + 16 ATP

C--- SUBUNIT: HEXAMER OF TWO ALPHA, TWO BETA, AND TWO DELTA CHAINS.

C-!- SUBUNIT: HEXAMER OF TWO ALPHA, TWO BETA, AND TWO DELTA CHAINS.

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.

Claim 4; Page 29; 37pp; English.

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is a complementarity determining region 3 (CDR3) of llama species (camelid) antibody VHH region

dorrigocin, lactimidomycin and related chemical structures via chemical engineering of the enzymes involved in the biosynthesis of dorrigocin and lactimidomycin. They are useful for introducing chemical modifications normally inert positions that permit subsequence chemical modifications and facilitate the development of polyketides. The genes and proteins of the invention can also be used to generate a focused library of analogues around a polyketide lead candidate to fine-tune the compound for optimal properties. They are useful for generating antibodies specific for the polyketide biosynthesis. The present sequence is Streptomyces platensis
                                                                                                                                                                                                                 The invention relates to novel proteins involved in the biosynthesis polyketide dorrigocin (DORR) or lactimidomycin (LACT) biosynthesis by microorganisms. Sequences of the invention allow direct manipulation
                                                                                                                                                                                                                                                                                                                                                        Novel isolated or purified polypeptide involved in biosynthesis polyketide dorrigocin or polyketide lactimidomycin, useful for portigocin or lactimidomycin.
                                                                                                                                                                                                                                                                                                          Claim 13; Page 182-188; 312pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş
                        The invention relates to cyclic peptides (A) with a constrained helical conformation, derived from gp41 (glycoprotein 41, a viral envelope CC protein) protein of human immunodeficiency virus (HIV). The cyclic peptides have formulas given in the specification part of which are CC derived from a consensus sequence of gp41 derived from HIV clades A, B, CC, D, E or O. The peptides are used to cause induction of a specific CC immune response, resulting in antibodies that prevent virus-induced CC membrane fusion. The peptides are used to treat subjects with, or at risk of, HIV infection, either as antifusion/anti-infection agents or, CC preferably where associated with a carrier, as an immunogen (including as vaccine) to raise antibodies. The antibodies may be used for diagnosis or prevention/treatment of HIV infection (i.e. acquired immunodeficiency syndrome, AIDS), e.g. prevention of mother-to-child transmission or in CC syndrome, AIDS), e.g. prevention of mother-to-child transmission or in CC syndrome, and the care accidents. The peptides can be based on specific HIV strains, e.g. breakthrough isolates of HIV that have developed during convection. The present sequence is gp41 protein from a particular HIV clade used to derive a consensus sequence of gp41. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

     CC The invention describes a constrained helical peptide compound (I) CC comprising a first constrained helical peptide comprising a sequence of 8 cmino acids (a.as) having a first and second terminal residue both CC flanking an internal sequence of 6 a.as, where the terminal residues have can side chain that are linked to each other forming a locking group to CC attached to a carrier, for use as an immunogen to raise antibodies that prevent viral membrane fusion, as haptens, preferably cantiached to a carrier, for use as an immunogen to raise antibodies that the composition of treatment of patients at risk of corried and administration of the composition of the combinatorial constrained helical peptide CC intraries that are useful in chemical selection systems, to isolate the CC libraries that are useful in chemical selection systems, to isolate the binding determinants from alpha-helical binding domains of known protein can serve as a structural model continuing domain of a known protein can serve as a structural model for the design of peptideminetics, to replace intact binding proteins or protein binding domains in the affinity purification of ligands, to mimic epitopes in proteins to selectively raise polyclonal or monoclonal antibodies against such individual epitopes for isolating synthetic cantibodies against such individual epitopes for isolating synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś

The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the novel polynucleotide, a host cell CC comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a CC that increases or decreases the expression of the polynucleotide sequence CC that is differentially expressed in neuronal tissue of a first animal CC that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates the expression of the polynucleotide sequence CC the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound to that regulates the activity in an animal of one or more of the polynucleosides given in the activity in an animal of one or more of the polyneptides given in the activity in an animal of one or more of the polyneptides given in the sequence specification, a method for identifying a compound useful in treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polypuclectide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 532 AA;
                                                                                                                             The present in invention provides the protein and coding sequences number of human immunodeficiency virus (HIV) type I non-subtype B isolates. The sequences shown include the near full-length coding sequences from each isolate, and the env, pol, vif, vpr, vpu, gag, rev and nef proteins. These can be used to detect the presence of H in a sample and to produce antibodies against non-subtype B HIV-1 These antibodies can be used in vaccines to prevent and treat HIV infection. The invention relates to a protein comprising or having at least 50% cc identity to any of the 2469 amino acid sequences, identified in the cspecification (available on a computer readable format), or its fragment, ce expressed from 2469 of 2489 identified DNA codding regions from the cc streptococcus pneumoniae type 4 strain genomic sequence appearing as composition), a kit comprising first and second primers, which are the composition a kit comprising first and second primers, which are the nucleic acid cited above or fragments between nucleotides 8-100 of a sequence contained within a Streptococcus nucleic acid sequence, where the first primer is substantially complementary to the target sequence and the second primer is substantially complementary to the target sequence complementarity define the termini of the target sequence contained within a Streptococcus nucleic acid sequence to be amplified, assay comprising contacting a test compound with the correction, and determining whether the test compound binds to the protein and a Streptococcus pneumoniae bactering a test compound with the caroding the proteins has been rendered inactive. The proteins, nucleic acid molecules, antibody and compositions are useful as medicaments for treating or preventing a disease or infection due to streptococcus sequence and multibotics. The methods are useful for identifying cimmunodominant proteins. The present sequence is one of the 2469 proteins componed the sequence data for this patent did not form part of the printed componed data for this patent did not format directly from WIPo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Streptococcus pneumoniae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         23-OCT-2003
